1. **General:**

Provide ProVia Aluminum Storm Door 800 Series Full View.

2. **Description:**

An aluminum one-lite storm manufactured by ProVia. It is a single hollow 1¼" thick aluminum door frame with a glass insert and interchangeable screen held in place by held in place by color matched clips and rivnuts.

3. **Materials:**

Door master frame, mullions and insert sections shall be extruded from 6063-T6 aluminum alloy having a tensile strength of 30,000 p.s.i. and a yield strength of at least 25,000 p.s.i., with a minimum wall thickness of .045" for main frame members. The door sweep spline shall be manufactured from polyvinylchloride plastic or its equal.

All fastening devices incorporated in the product shall be of aluminum, stainless steel or other non-corrosive materials compatible with aluminum. Cadmium or zinc-plated steel, where used, shall be in accordance with ASTM B766 or ASTM B633. Screws, door hardware, etc. shall be supplied to make a complete installation.

4. **Construction:**

The main frame shall be made of hollow extrusions with a minimum 2¾" face and a 1¼" thickness as standard with the manufacturer. Main frame members shall be accurately machine cut to form rigidly mitered corner joints. Main frame corners shall have (1) each Molded Corner Gussets with 10-16 x ½" #8 Steel Hex Head Screws. Frame corners shall be of single corner key construction with 4 screws in each corner. The bottom of the door shall have an exterior expander channel with grooves to accept 1 to 3 extruded vinyl door sweeps depending upon hardware options. Expanders shall be adjustable to extend 1".
5. **Screen:**

Screen frames shall be extruded aluminum with .040" nominal wall thickness. Corners shall be firmly joined in a secure workmanship like manner. Frames shall be of sufficient rigidity and cross-braced to prevent excessive bow in frame members and sag in screening.

Standard screen cloth is fiberglass 18 x 16 mesh and shall meet the requirements of ASTM D3656-2004. Screen shall be securely held in frame with vinyl or polyethylene spline.

Optional aluminum screen must meet requirements of ANSI/IWS 089 “INSECT WIRE SCREENING”.

6. **Door Lite Insert:**

Door insert(s) to be of extruded aluminum. Glazing shall be of the wrap around marine-type glazing (no metal to glass contact), using 1/8" double strength tempered safety glass. Vinyl glazing channel shall be of one piece and shall tightly hug glass panel in such a way that no measurable air infiltration will occur at edges of glass panel. Material shall be of sufficient quality for re-use when re-glazing becomes necessary.

7. **“Z”-Bar:**

“Z”-Bar shall be of extruded aluminum of .045" thickness with a weather-strip groove to receive woolpile weather-stripping to seal against weather, dust infiltration and noise. The head frame shall be designed and extruded to function as a drip cap over the top of the door. Hinges to be attached to the “Z”-Bar. Exterior installation screws are hidden by the snap-on screw cover on the “Z”-Bar.
8. **Hinges:**

Each door is to be supported by no less than four (4) integral leaf hinges of not less than 4" in length utilizing the raised knuckle of the extruded “Z”-Bar to receive an extruded aluminum hinge leaf. They will be joined to the knuckle by two plated steel pins pivoting in four Oilite™ brass bushings. The two pins are held securely in place by a plated steel compression spring.

9. **Hardware:**

Door is supplied with a complete hardware kit which includes: black pull handle set and black medium duty closer with sleeve.

10. **Finish:**

To be selected from ProVia’s four (4) colors of: Snow Mist White, Cafe’ Cream, Tudor Brown and Rustic Bronze. Finish to be ProVia’s factory applied baked enamel, meeting AAMA standard #2603-02 for organic finishes on aluminum. ProVia uses a baked on enamel, Polycron III finish.

11. **Dimensions:**

Main frame shall have a width across the flat surface of 2⅜" with a thickness of 1¼" and wall thickness of .045". Insert frame and inserts to have wall thickness of .040". Expanders have a wall thickness of .050" with a depth of 1½". “Z”-Bar wall thickness is .045" with a side flange width for bearing against the door buck with a 1" return for Western Style “Z”-Bar or ¾" for Eastern Style “Z”-Bar.
