- Head & Sill Extenders
- Wash-Ability Hinge
- 3/4" Frame Depth
- 7/8" Insulated Glass
- Multi-Point Locking System
- Aluminum Reinforced Sash & Frame
- Extruded Aluminum Screen Frame with Fiberglass Mesh
Vinyl Casement Window

- Casement windows are the most energy efficient operable windows because they allow the least amount of air infiltration when closed and allow the most ventilation when opened.

- The screen is mounted inside and is easily removed for cleaning.

- Security is improved with operator handles allowing window to be partially opened and resist additional force.

- The “wash-ability hinge” allows homeowner to clean the sash safely from inside the home, rather than from the outside.

- When Egress hinges are used, a clear opening emergency exit is created.

- The sash presses against the frame when closed and releases when opened reducing weather-stripping damage.

- The profiles of the window frame are narrower than most windows - no option of adding insulation.
