Double 5" Solid in White, Sandalwood, Pewter and Clay can be used as vertical siding.

WHY SHOULD YOU INSTALL FULLY VENTED SOFFIT?

- Air always contains water
- When air contacts a cold surface, condensation occurs
- Condensation can damage wood, plaster, paint and insulation
- Damp conditions can lead to mold and mildew growth
- Most states allow exclusion of mold damage from homeowner insurance policies
- Ventilation is critical to help eliminate damage to your home

Moisture is trapped without proper ventilation leading to ice build-up, rotting, mildew and damaged roof components.

Vented soffit helps ensure proper ventilation and avoids damage to the home's interior and exterior by allowing moisture to escape.
